PROFESSIONAL SUMMARY

Data and Business Intelligence (BI) analyst with 2+ years in financial services, specialising in SQL pipelines, Power BI dashboards, and Python analytics. Proven track record automating reporting, improving data quality, and delivering actionable insights that drive measurable business outcomes. Currently completing a Master's in Business Analytics at Macquarie University.

EDUCATION

Macquarie University, Sydney *Jun 2026 (Current)*
Master of Business Analytics

Institute of Business Administration, Pakistan *Jun 2022*
Bachelor of Science in Accounting and Finance

WORK EXPERIENCE

H4 Solutions | Business Intelligence Analyst | *Sydney, Australia* *Aug 2025 – Present*

- Engineered data pipelines for 3 enterprise clients in banking and media, processing 100K+ records using SQL and Python (pandas, SQLAlchemy) to power real-time dashboards and automated reporting.
- Built 5+ Power BI dashboards with automated data refresh, reducing manual reporting effort by 40% and improving Extract, Transform, Load (ETL) pipeline reliability across concurrent projects.
- Supported data modelling and ETL workflow design for analytics pipelines across banking and media clients, improving data accuracy and reducing pipeline failures.

Telenor Microfinance Bank | Credit Analyst | Risk Analytics | *Islamabad, Pakistan* *Aug 2022 – Jun 2024*

- Built automated SQL pipelines and Power BI dashboards monitoring portfolio performance across 150+ branches, reducing manual reporting time by 70% and improving loan recovery rates by 12%.
- Automated daily portfolio reporting using SQL (window functions, CTEs) and Excel VBA, cutting reporting errors by 30% and improving audit compliance.
- Designed real-time KPI dashboards at region, branch, and product level, enabling management to identify underperforming areas and take targeted corrective action across 150+ branches.

Siemens Pakistan | Project Execution Intern | *Karachi, Pakistan* *Mar 2022 – Jun 2022*

- Developed a Power BI dashboard consolidating cost, cash flow, and profit forecasts across 10+ projects, enabling corrective actions 20% faster and increasing revenue forecast accuracy by 15%.
- Streamlined project accounting workflows by automating purchase requisition tracking in SAP, reducing service entry processing time across 10+ concurrent projects.

PROJECTS

Car Price Prediction — End-to-End ML Pipeline [GitHub]

- Built an end-to-end pipeline using pandas and scikit-learn on a 20,000-row dataset, achieving R^2 of 0.89 with Random Forest after hyperparameter tuning; reduced prediction error 15% vs baseline.
- Evaluated Linear Regression, Decision Trees, Random Forest, and Gradient Boosting models using cross-validation and hyperparameter tuning, selecting the optimal model through systematic performance comparison.

GymTrack: Membership & Revenue Analytics Platform [GitHub]

- Designed an 8-table relational database (600+ members) and SQL analytics revealing Premium plans drive 2.5x more revenue than Basic, with recommendations to increase class utilisation by 30%.
- Developed SQL queries and analytics tracking trainer performance, class occupancy, and member retention trends, uncovering actionable insights to support data-driven operational decisions.

Queensland Road Crash Data Analysis [GitHub]

- Analysed 500K+ crash records (2001–2023) in Tableau, identifying peak crash hours (3–6 PM) and high-risk zones accounting for 40% of severe incidents to inform targeted infrastructure investment.
- Built interactive dashboards including time trend analysis, severity heatmaps, and treemaps, presenting data-driven road safety recommendations to inform peak-hour interventions and high-risk zone upgrades.

SKILLS

Programming & Data: Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), R, SQL, Microsoft Excel, Excel VBA, Jupyter Notebook
Data Visualisation: Tableau, Power BI, Plotly
Machine Learning & Statistics: Regression, Classification, Clustering, Time Series Forecasting, Hypothesis Testing
Database & ETL: PostgreSQL, MySQL, ETL Pipeline Design, Data Modelling, Normalisation, ERD Design, Git, GitHub
